

AKSHAYA K K

Senior QA Automation Engineer | SDET

Chennai, Tamil Nadu | 7550032632 | akshayaprem98@gmail.com | linkedin.com/in/akshaya-k-k-aa675618b

PROFESSIONAL SUMMARY

Senior QA Automation Engineer / SDET with 5+ years architecting test automation frameworks and AI-powered quality engineering tools for enterprise SaaS platforms. Built a hybrid Playwright + TypeScript automation suite that cut regression-testing cycle time by ~86% (5 days/3 resources to 2 days/1 resource) and became Kissflow's team-wide automation standard. Independently designed three AI-driven engineering tools — Lumex, Invoker, and SpiderSense — that cut bug-reporting time by 90%, production-debugging time by up to 80%, and feature-validation cycles by up to 50%. Proven strength in API testing, root cause analysis, framework ownership, and mentoring 5–10 QA engineers to raise team-wide release quality. Targeting a Senior SDET / QA Lead role at a product-led SaaS company.

TECHNICAL SKILLS

Automation & Languages: Playwright, TypeScript, Playwright MCP

API & Data: REST API Testing, Postman, MongoDB, Next.js

CI/CD & Tooling: Jenkins (CI/CD pipeline quality gates), Git, GitHub, GitHub CLI, Jira, GCP Logging

AI-Assisted Engineering: Claude Code, Claude Code Plugins, Anthropic Claude, GPT-4 Vision, Codex, Gemini, ChatGPT

Testing Disciplines: Manual, API, UI, Regression, Sanity, Functional, End-to-End (E2E)

Methodologies: STLC, SDLC, Agile, Defect Lifecycle Management, Root Cause Analysis (RCA)

PROFESSIONAL EXPERIENCE

Senior QA Automation Engineer

Nov 2023 – Present

Kissflow | Chennai

- Architected and maintained a hybrid Playwright + TypeScript automation framework unifying UI, API, sanity, and regression testing into a single scalable suite, establishing the automation standard adopted team-wide.
- Integrated the automation suite into Jenkins CI/CD pipelines as a mandatory quality gate, automatically blocking any build from deploying to an environment unless it met a defined average pass-rate threshold.
- Automated core business workflows across Apps, Portal, and Forms modules using Playwright, cutting regression-testing cycle time from 5 days (3 QA resources) to 2 days (1 QA resource) — an ~86% reduction in total testing effort.
- Independently designed and built Lumex, an AI-powered bug-reporting Chrome extension (TypeScript, Tailwind CSS, Claude, GPT-4 Vision), cutting bug-report turnaround time by over 90% (10+ minutes to under 60 seconds) with 90% field auto-mapping accuracy.
- Owned API testing, defect triage, and root cause analysis across production issues spanning release regressions, customer-account, infrastructure, and data-migration incidents.
- Built real-time QA dashboards and production-metrics reporting pipelines using Kissflow REST APIs, giving executive leadership live visibility into release health and system quality.
- Mentored a team of 5–10 QA engineers on automation practices and partnered with Product Owners and Engineers across Agile ceremonies (sprint planning, grooming, retrospectives) to align test strategy with release goals.

QA Test Engineer

Feb 2022 – Nov 2023

Saama Technologies Pvt. Ltd.

- Executed functional, regression, integration, sanity, and end-to-end testing across sprint releases, supporting on-time, defect-minimized delivery.
- Authored test plans, test cases, and requirement traceability matrices (RTM), and tracked defects to closure in Jira, improving coverage visibility for stakeholders.

- Partnered with developers on effort estimation, sprint planning, and release validation, reducing post-release defect leakage.

Catalog Associate

Nov 2020 – Feb 2022

Amazon

- Identified and resolved marketplace catalog data-quality issues, improving listing accuracy across the product catalog.

KEY PROJECTS

Invoker — AI-Powered Production Ticket Debugger

- Engineered a skill-based Claude Code plugin architecture with intelligent knowledge retrieval for ticket triage, log analysis, PR diff review, test data setup, and root cause analysis, reducing average debugging time from 30–60 minutes to under 10 minutes (up to 80% faster) for common issue patterns.
- Tech Stack: Claude Code Plugins, GCP Logging, GitHub CLI, Kissflow REST APIs.

SpiderSense — AI-Powered QA Automation & Testing Assistant

- Developed a multi-agent AI workflow that generates test plans from PRs, executes browser tests via Playwright MCP, investigates failures through GCP log analysis, and produces evidence-backed QA sign-off reports, cutting feature-validation effort from 5 days to 2–3 days (up to 50% faster).
- Streamlined test data setup with API-driven scripts, reducing manual environment preparation from 1–3 hours to under 20 minutes.
- Tech Stack: Claude Code Plugins, Playwright MCP, TypeScript, GCP Logging, GitHub, Kissflow REST APIs.

SLA Diagnostic Dashboard

- Rebuilt a failed SLA reporting tool into a full diagnostic dashboard synced with live Kissflow MongoDB data (11,275+ tickets), replacing a flat "% met/missed" view with drill-down breakdowns by team, component, and time period.
- Added resolution-time distribution charts, trend lines, and a what-if evaluator to enable data-driven SLA threshold decisions, giving the CPO the evidence needed to resolve two prior demo rejections.
- Tech Stack: Next.js, TypeScript, MongoDB, Kissflow data layer.

EDUCATION

B.E., Electronics & Communication Engineering

Tagore Engineering College, Chennai | 2016 – 2020

AWARDS & RECOGNITION

- Extra Mile Award — Amazon (automation/process improvement)
- Shining Star Award (x2) — Saama Technologies
